Nordan Marine - Cooling Compressors Service

Nordan Marine qualified Service Engineer have years of experience with Cargo Cooling Compressor service on a variety of different Gas Carriers. Nordan Marine one-company solution meets our customers' needs for service of Cargo pumps, Safety Relief Valves, Calibration and Cooling Compressor.

Cooling Compressors Service

Nordan Marine trained and experienced Service Engineers have extensive knowledge with many types of cooling compressors. We offer you repair and preventive maintenance of cooling compressor services.

Nordan Marine provides following service:

- Valve service
- Field service
- Technical support
- Component repair
- Engineering services
- condition monitoring and diagnostics

All our Service engineers have mechanical education, and have been trained to service and repair cargo-cooling compressor. They travel all over the world providing service in a planned docking as well as sea.

Cooling Compressors Service

Spare Parts

Nordan Marine offers a wide range of spare parts; our spare parts are at very competitive price. We carry a large stock of common spare parts, and have a very close relationship with our sub-suppliers and can therefore offer short delivery times ensuring your Cargo Cooling compressor perform with optimal capacity.

Pre- docking Inspection / Assessment

As a service to our clients, Nordan Marine offers a free pre-docking inspection service. We will bear the Service Engineer cost. Only direct cost such as flight tickets-hotel and living expenses will be invoiced to the client.

The inspection / assessment will normally take place in a discharge port 3 to 4 month before the vessel will go to dry dock. A detailed report will be worked out, outlining the performance of the cargo pumps, booster pumps, safety valves, cooling compressors and instrumentations. This allows our clients better preparation of the next docking.
